

Distributed Information Technologies, Inc. acquiring Integral Business Solutions, LLC

Distributed Information Technologies, Inc. (DIT), an Arlington, Virginia-based IT professional services company, announced today that it is acquiring the cyber security consulting practice of Minneapolis, Minnesota-based Integral Business Solutions, LLC (Integral).

The acquisition brings together strong, complementary service offerings – DIT’s deep expertise in application development and enterprise asset management solutions and Integral’s extensive experience in information security solutions. Following the acquisition, DIT will be able to offer more holistic IT solutions to its clients and to leverage its areas of expertise to improve and advance existing solutions.

"Our expanded service portfolio will enable us to provide a wide range of information security services to our clients," said Duane Graham, CEO of DIT. "For the past 18 years we have been continuously focused on developing capabilities and solutions to meet our customers’ evolving needs. This acquisition gives us the ability to offer cutting-edge technology services in cyber security, security engineering, fraud detection and identity management."

"DIT is a perfect fit for this part of Integral’s business. Going forward, DIT will be able to provide an ideal suite of information technology and information security services," commented Rick Benway, CEO of Integral. "Integral has developed robust methodologies and best practices in security engineering which will allow DIT to expand its offerings and deliver additional value to its customers. Of equal importance, clients and partners of the cyber security consulting practice will benefit from the deep expertise in leading-edge application development and enterprise asset management solutions DIT will offer them."

The acquisition is the next logical step for the technology partnership previously formed by DIT and Integral. DIT will extend its customer focus and service offerings to the commercial markets where Integral is an established information security services provider. The acquired cyber security consulting practice will operate as Integral Business Solutions, Inc., a wholly-owned subsidiary of DIT.

About Distributed Information Technologies

Founded in 1993, DIT is a minority-owned small business located in Arlington, Virginia. DIT provides IT consulting, development and operational services that help large organizations adopt, develop and maintain enterprise-class technology solutions – helping clients improve operational and programmatic productivity, reduce costs, and meet their business objectives.

DIT offers a full range of IT services, including Program and Project Management, COTS implementations, custom web application development, and operations and maintenance support. In addition to its core IT service offerings, DIT provides customers with expertise in a number of specialized areas, including Facility, Asset, and Logistics/Supply Chain Management; ERP Financials; Mobile Solutions and GIS.

Distributed Information Technologies, Inc. acquiring Integral Business Solutions, LLC

DIT currently provides IT solutions and consulting services for the Federal Government (DOD and Civilian), commercial companies and non-profit organizations.

About Integral Business Solutions:

Established in 2000, Integral Business Solutions started as a software solutions provider primarily for the U.S. Department of Defense. In 2004 Integral expanded into the commercial marketplace focusing on application security solutions. Integral has successfully implemented information security solutions including identity management, proactive fraud management, application security assessments, and certification and accreditation solutions using NIST and DIACAP frameworks.

Integral's clients range from the Fortune 100 to state and local governments to the U.S. Department of Defense.

Integral is an Oracle Gold Partner specializing in strategic and Technical consulting on Oracle's Security and Fusion Middleware portfolio.
